1   Service Description Overview

The get-data service allows systems which has bought a specific piece of data to access it. To get this data it is required that the two systems has made a contractual agreement through the contract system.

2   Abstract Information Model

The get-data service has one interface exposed which allows for systems to get data which they have bought. This interface is `get-data`.

2.1   Get-data

Get-data is used to retrieve data which a system has bought from another system. If the request is correctly formatted and contains the correct identifier, the data will be return. If the request does not contain the correct identifier or the request is incorrectly formatted an error will be thrown.
